Abstract (en)
[origin: WO2018207093A1] The lock (1) comprises: a fastening device (2) positioned on a first portion (3) of a window frame (4) adapted to stop up against a second portion (5) of said window frame (4), provided with at least one sliding element (8) along a substantially vertical sliding direction (9) and with at least one hook (10) associated with said sliding element (8) in an integral manner; a fastening seat (11); a control device (12) associated with the fastening device (2) to lift/lower said sliding element (8); a locking device (16) associated with at least one of the first portion (3) and the second portion (5), and operable between a locking configuration, in which it interacts with said hook (10); and a passage configuration, in which it is released with respect to said hook (10).
