Abstract (en)

[origin: WO2018206307A1] The invention relates to a window (10) or a door having a first tilt-open limitation device. In the first tilt-open limitation device there is formed a slide (56) in which a first coupling pin (32) is uninterruptedly guided as long as a sash/leaf (14) of the window (10) or door is situated between a closed position and a tilted position. The first coupling pin (32) can be transferred into an opening position in which the first coupling pin (32) is out of engagement with the slide (56). The slide (56) is preferably completely formed in a guide part which is pivotably arranged on a mounting part.
