Abstract (en)  
[origin: WO2018208240A1] The invention relates to a hinge with two securing parts (20, 30) for directly or indirectly securing to two furniture parts (11, 12) which can be pivoted relative to each other, wherein the securing parts (20, 30) are pivotally connected together via a connection assembly (23, 40). A linear guide element (23, 33) is arranged on each of the two securing parts (20, 30), said linear guide elements interacting in order to form a linear guide, and the hinge has a guide device (40) which is designed to adjust the linear guide depending on the interrelated pivot positions of the securing parts (20, 30). The invention further relates to a method for adjusting a first securing part (20) of such a hinge relative to a second securing part (30) in an articulated manner. The hinge and the method allow a pivotal connection between furniture parts with an at least reduced risk of injury.
