Abstract (en)

[origin: WO2018206325A1] The aim of the invention is to project water, foam or the like onto light flying objects (30) in order to intercept or impede the flight of the flying object, i.e. to make the flying object (30) unable to fly. The determining factor for the type of protective measure to be carried out is the intensity of the protective or countermeasure, namely whether the flying object (30) is to be crashed or only diverted off-course. The protection system (20) for protecting against the light flying object (30) comprises at least one effector (2, 21-n) for applying a non-lethal protective measure.
