Abstract (en)

[origin: WO2018206351A1] The invention relates to an electric machine for a motor vehicle or a motorcycle. The electric machine has: a stator; and a rotor which is inserted into the interior of the stator such that the rotor rotates about a rotational axis when the electric machine is operated as intended, wherein the rotor has a receiving area in which a rotor position sensor is received that supplies an output signal for controlling the electric machine when the electric machine is operated as intended, said output signal indicating the rotational position of the rotor.
