Abstract (en)

A package (1), which comprises an outer sleeve (2) and a tray (3) accommodated slidably within the outer sleeve and capable of motion between a closed position and an open position, and the package comprises a locking mechanism for preventing immediate opening of the package from the closed position to the open position. The package further comprises a locking tab (7) arranged at the bottom part of the tray (3), which locking tab (7) is arranged to be against a folded flap (25a) inside the open-ended first end of the outer sleeve when the package is opened for preventing to draw the tray fully out from the outer sleeve.
