Abstract (en)

[origin: EP3623548A1] Closure system for a leaf of a window or door, comprising a lock-body (2) applicable to a leaf (100), a closing bar (5) movable between an extracted configuration from the lock-body (2) and a retracted configuration in the lock-body (2), and at least one command member (12) manually activatable by a user and kinematically connected or connectable to the closing bar (5), said command member (12) being manually subjectable to a thrust or traction force in order to assume at least two operating positions, corresponding to the extracted configuration and the retracted configuration of the closing bar (5), respectively, wherein the command member (12) acts directly on the closing bar (5) by means of at least one manoeuvring element (8) directly applied to the command member (12) or to the closing bar (5).
