Abstract (en)
[origin: EP3624112A1] The invention relates to an in-ear ANC earphone, worn at least partially with its Eartip (5) in the external auditory canal, with at least one Speaker (1) with a Frontal Volume (2) and/or Speaker Channel (10) leading to Tip Area (6) and with at least one ANC Microphone (11). In order to create an in-Ear ANC earphone in which the ANC circuit remains stable even under varying wearing conditions, with the small available space having to be taken into consideration, the invention provides for a connection of Frontal Volume (2) and/or Speaker Channel (10) with an Additional Volume (3) via a Tube (7) ending in Tip Area 6.
