Abstract (en)

[origin: WO2018210595A1] The invention relates to a dishwasher (1), particularly a household dishwasher, comprising a container (2) for items to be washed, a lower receiving element (12) for items to be washed, arranged in the container (2) for items to be washed, an upper receiving element (13) for items to be washed, arranged above the lower receiving element (12), a lower spray device (16) associated with the lower receiving element (12), for spraying the items to be washed arranged in the lower receiving element (12) with detergent, an upper spray device (17) associated with the upper receiving element (13), for spraying the items to be washed arranged in the upper receiving element (13) with the detergent, a hydraulic device for conveying the detergent to the lower spray device (16) and to the upper spray device (17), and a control device (15) for executing a washing program of a number of washing programs for washing the items to be washed, the control device (15) being designed to control the hydraulic device in such a way that, in a first section of the washing program, the detergent at a first detergent temperature is only sprayed onto the lower receiving element (12), and in a second section of the washing program, following the first section, the detergent at a second detergent temperature lower than the first detergent temperature is sprayed onto the lower receiving element (12) and onto the upper receiving element (13).
