Abstract (en)

[origin: WO2018211190A1] The invention concerns an air distribution device for a motor vehicle comprising a hollow body (10) defined by walls (210, 212, 220, 222) in which, in at least one of the walls, at least the following are provided: - an inlet opening (6) for a treated airflow originating from a ventilation, heating and/or air conditioning system to enter the hollow body, - an outlet opening (7) for an emitted airflow (70). An additional opening (8) is provided in at least one of the walls defining the hollow body and opens on said flow of the treated airflow (60), such that a flow of passenger compartment air (80) from the passenger compartment of the vehicle is sucked through the additional opening by the flow of the treated airflow into the hollow body.
