Abstract (en)

[origin: US2018334040A1] Apparatus and method for automated electric vehicle charging. One embodiment provides a method for automated charging including storing, in a memory, a rate profile of a power grid and determining, using an electronic processor, a time to full charge. The method also includes determining, using the electronic processor, a target time for completion of charging and generating, using the electronic processor, a charging profile. The method further includes charging, using a charging controller, based on the charging profile.
