Abstract (en)

[origin: WO2019015920A1] The invention relates to a galvanically coupled electrical converter for converting an input voltage applied to first terminals into an output voltage, comprising a step-up converter which is connected on the input side to the first terminals, a buck-boost converter which is connected on the input side to the first terminals and a series circuit of two capacitors, which is connected to the output-side positive terminal of the step-up converter and to the output-side negative pole of the buck-boost converter, wherein the output-side negative pole of the step-up converter and the output-side positive pole of the buck-boost converter are connected to the medium connection between the capacitors.
