Abstract (en)

[origin: EP3626706A1] The present invention refers to a method for increasing the guanidine carbonate yield in a combined melamine low pressure process (10) and guanidine carbonate treatment process (20) by adding cyanamide and/ or dicyandiamide to a) a melamine mother liquor (MML) obtained in the melamine low pressure process (10), and/or b) a guanidine carbonate mother liquor (GCML) obtained in the guanidine carbonate treatment process (20), and /or c) a mixture of a melamine mother liquor (MML) and a guanidine carbonate mother liquor (GCML).
