Abstract (en)
An outdoor partition including a load-bearing structure and a plurality of planks as well as a method of building such a partition is disclosed. At least one plank fastening bracket of the load-bearing structure includes at least one flange, which protrude from the load-bearing structure in a plane parallel to a partition plane, and the planks also extend in parallel with the partition plane. At least one end surface of each plank is provided with an end groove, and the flange(s) of the plank fastening bracket(s) extend(s) into end grooves of the planks. The planks are arranged with an inner surface facing an outer surface of the load-bearing structure and overlapping the posts and/or beams so that the outer surface of the load-bearing structure is covered by the planks and hidden from view.
