Abstract (en)

[origin: CN110905286A] The invention relates to a reset device for a handle of a fitting, a fitting with a reset device and a position changing method of the reset device. The reset device has a guard coupling element having a stop element with a first stop surface and a second stop surface, a spring element with a first spring end and a second spring end, and a handle coupling element. The handle coupling element rotates about a rotational axis in the circumferential direction relative to the guard coupling element at least between a first handle stop position and a second handle stop position, the handle coupling element and the spring element are coupled in the circumferential direction between the first handle stop position and the second handle stop position, the spring element is rotatable by rotation of the handle coupling element between a first spring stop position, in which the first spring end rests against the first stop surface, and a second spring stop position, in which the second spring end rests against the second stop surface.
