Abstract (en)

The present invention relates to a cosmetic container equipped with a top cap having improved sealing force, and more specifically, to a cosmetic container equipped with a top cap having improved sealing force comprising: a container main body for accommodating content; a discharge means, formed on the inside of the container main body, for discharging the content; an applicator coupled to the top portion of the discharge means and provided with a discharge port on one side; and the top cap coupled to the top portion of the container main body, wherein the top cap is provided with a sealing member on the inside and has a structure wherein a sealed portion is formed at the center of the sealing member, so that when the top cap is closed over the container main body, the applicator is tightly coupled to be in close contact with the sealed portion in the sealing member thereby improving the sealing force of the applicator.
