Abstract (en)

A substrate and a raised floor formed by using the same; the substrate is provided on a support stand and can be used to mount at least one plate thereon, and the substrate has at least one first region and at least one second region thereon. The first region has a shape of a long strip, the second region and the first region are adjacently provided along a first direction, and the second region forms a misalignment with the first region along a second direction perpendicular to the first direction, such that the first region and the second region form a segment difference in the second direction; when a plurality of substrates are adjacently arranged, the plate is enabled to form mutually crossed patterns on the substrate.
