Abstract (en)

[origin: WO2018219410A1] The problem addressed by the invention is that of providing a multifunctional, well visible and perceptible, optical workspace status indication system. In particular, the optical workspace status indication system should make optically visible the occupation or availability of the office workspace, the usage status of office communication devices and/or the status of the employee. The workspace status indication system should be adaptable to different office workspaces and to individual requirements. A workspace status indication system, characterized in that at least one luminous indicator (1) and/or at least one screen (9) is arranged on or integrated into a piece of office furniture (6), wherein at least one interface (2) to at least one office communication device (3), room equipment (3), an application and/or at least one switching unit (4, 5) controlled manually or by sensor or to at least one sensor is present at the luminous indicator (1) and/or the screen (9), the at least one luminous indicator (1) and/or the at least one screen (9) being designed at least to indicate the status with respect to an office workspace and/or communication devices, applications, environmental conditions and/or employees.
