Abstract (en)

[origin: CA3064984A1] The invention concerns an individually adaptable impression tray for dental fine impression, wherein the impression tray is formed substantially from a thermoplastic material which in the heated state permits adaptive forming of the impression tray in the mouth of a patient. At least in partial regions in which a fine impression is to be made the impression tray has a spacer layer of a predetermined thickness, wherein the spacer layer is completely or partially removable after the forming operation.
