Abstract (en)
[origin: WO2018219588A1] The invention relates to an application device and to an application method for applying a coating agent (e.g. primer), for preparation for a subsequent adhesive bonding operation, to a component surface of a component (1), namely to a surface of a keder strip (1), of a motor-vehicle body component or of an add-on part of a motor-vehicle body component, said application device having a coating-agent nozzle (9) for applying the coating agent to the component surface of the component (1) that is to be coated. According to the invention, the application device blows a gas, in particular compressed air, on the coated component surface after the application of the coating agent in order to distribute the coating agent uniformly on the component surface.
