Abstract (en)
[origin: WO2018215366A1] In order to slide in a box and form a slide box, a slide-over sleeve is provided. The slide-over sleeve comprises a lid, a base, a first lateral wall, and a second lateral wall which are connected together in an articulated manner in order to form a collar. The lid is divided into a first lid part which adjoins the first lateral wall, a second lid part which adjoins the second lateral wall, and a third lid part which lies between the first and the second lid part and comprises two free outer edges. The third lid part is connected to the first lid part in an articulated manner via a first joint connection with a first joint axis, and the third lid part is connected to the second lid part in an articulated manner via a second joint connection with a second joint axis. The invention further relates to a flat blank for folding a slide-over sleeve, a lid for closing a box, a covered box, and the box itself.
