Abstract (en)

[origin: WO2018219523A1] The invention relates to a device for transporting containers (2) on a transport route (TS) comprising at least one first transport element (TE1) and a second transport element (TE2), wherein the transport route (TS) has a first and a second part-circular shaped transport route section (TSA1, TSA2), and a third transport route section (TSA3) positioned between the first and second transport route section (TSA1, TSA2). The third transport route section (TSA3) also comprises at least one transport route region having a course in the shape of a curved section, with a kink-free, continuously increasing or decreasing and smooth curvature.
