Abstract (en)

[origin: WO2018219851A1] The present invention relates to a working device for carrying out fitting or maintenance work in an elevator shaft (4). The working device comprises at least one working platform (1) having a standing surface (5) and a railing (6). The standing surface (5) affords space for at least one person and the railing 6 at least partially encloses the standing surface (5). The working device also comprises at least one additional platform (10), wherein the additional platform (10) is attachable to the railing (6, 7) of the working platform (1), and wherein the additional platform (10) affords an additional standing surface (13) for at least one person. The additional standing surface (13) is arranged above the railing (6).
