Abstract (en)  
[origin: WO2018219758A1] The invention relates to a temporary movable platform for assembling lift equipment in a lift shaft, to a method for erecting such a movable platform, and to a method for adapting such a movable platform. The movable platform (7) according to the invention is designed to be arranged substantially in the region of a shaft opening (2) such that the movable platform (7) partially sits on a floor surface (4) of the building and partially protrudes into the lift shaft (1). The movable platform (7) comprises a bottom frame (9) and bottom plates (8) that lie on the bottom frame (9) or are inserted into same. The bottom frame (9) also comprises two lateral bottom bars (10), at least one front and one rear transverse bar (11, 12) that interconnect the two lateral bottom bars (10), and also at least two intermediate bars (13) that are arranged parallel to the two lateral bottom bars (10). The two intermediate bars (13) are supported substantially by the front and the rear transverse bars (11, 12).
