Abstract (en)  
[origin: WO2018215698A1] The internal combustion engine (10) comprises at least two cylinders (11, 1') with parallel longitudinal axes, each cylinder comprising an opening and a piston (12, 12') capable of moving in translation inside said cylinder, the respective openings of the cylinders facing each other, the pistons being in kinematic relation with a connecting rod-crank mechanism comprising: - a spacer (13) connecting said pistons, suitable for maintaining a fixed spacing between the pistons, the pistons being respectively attached to the arms (131, 131') of the spacer, - a crankshaft (20) rotating about an axis, arranged between the openings of the cylinders and between the longitudinal axes of said cylinders, the crankshaft comprising a crank pin (21), - a rocker (40) rotating about the crank pin, - at least one connecting rod (30) comprising a first so-called "bottom" end (31), rigidly attached to the spacer, and a second so-called "head" end (32), rigidly attached to one of the ends of the rocker.
