Abstract (en)

[origin: WO2018219913A2] The invention relates to a telescopic sight for a telescopic sight weapon, in particular hunting rifle, comprising a tube that is secured or can be secured to the weapon and in which an optical system (2) is accommodated, said system comprising a lens system (100), an inverter system (200) and an ocular system (300) which are arranged successively in the direction of light and which define an exit pupil. The ocular system (300) comprises a first ocular lens group and a second ocular lens group which are arranged successively in the direction of light. The first ocular lens group comprises a first negative meniscus lens (301, 302) and a second negative meniscus lens (303, 304) arranged successively in the direction of light. The concave surfaces of the first meniscus lens (301, 302) and the second meniscus lens (303, 304) are oriented towards the object side and the second ocular lens group comprises at least two positive individual lenses (305, 306, 307).
