Abstract (en)  
[origin: WO2018222500A1] An exemplary virtual reality system ("system") generates an experience selection data structure configured to facilitate dynamic selection of different entries included within the experience selection data structure by a media player device as the media player device provides different virtual reality experiences to a user by processing different virtual reality datasets corresponding to different entries that the media player device selects. The system provides the experience selection data structure to the media player device and detects that the media player device selects an entry by way of the experience selection data structure. The entry corresponds to a particular virtual reality dataset that is customized to a particular virtual reality experience. In response to the selection of the entry, the system provides, to the media player device, the particular virtual reality dataset that is customized to the particular virtual reality experience.
