Abstract (en)
[origin: WO2018219637A1] The invention relates to a kit (1) for a lead-through arrangement for the electrical connection of a transformer system through an opening (2a) in a housing wall (2) of the transformer system, the kit (1) comprising: an elongate electrical conductor (3), which has, along the length of the conductor (3), at least one first section (3') located inside the housing wall (2) in the mounted state and a second section (3'') located outside the housing wall (2) in the mounted state ; and at least one first insulating element (4) that can be inserted into the opening (2a) in the housing wall (2) and has an opening (4a) for at least partially receiving the conductor (3), the opening (4a) of the insulating element (4) being arranged so as to guide the conductor (3) from an outer face (2'') of the housing wall (2) to an inner face (2') of the housing wall (2), the at least one first insulating element (4) comprising at least one clamping element (6).
