Abstract (en)

The present invention provides an electric heating device easy for taking a cigarette out. The electric heating device comprises: a heating assembly and a cigarette taking-out assembly. The heating assembly comprises a heating cavity and a heating element located in the heating cavity; the heating cavity is used for accommodating a fuming product; the cigarette taking-out assembly comprises a sliding part and a push-and-pull part which is in linkage with the sliding part; the sliding part can be driven by the push-and-pull part to move in a direction away from the heating element along the axial direction of the heating cavity, so that the fuming product in the heating cavity can be moved out of the heating cavity. In the present invention, the sliding part is driven by means of the push-and-pull part to move, and then the fuming product is driven by using the movement of the sliding part to move out of the heating cavity. Compared with the prior art, the present invention achieves taking out tobacco after a low-temperature tobacco product is inserted and consumed, and is easy for cleaning residual tobacco in the heating cavity.
