Abstract (en)
[origin: AU2019229431A1] SLICER AND METHOD FOR SLICING SUCCESSIVE LOAVES OF BREAD 5 Slicer for cutting successive loaves of bread (10,11) with a receiving surface (4) for the loaves (10,11) to be cut and a transport surface (5). The transport surface (5) being movable between a receiving position allowing to move a loaf of bread (10,11) to be cut from the receiving surface (4) to the transport surface (5), and a delivery position allowing to place the loaf (10,11) in said input compartment (7) opposite the set of blades (2). The invention is characterised in that it comprises a stopping means (6) which is movable between a retracted position in which a loaf of bread (10, 11) can be moved from the receiving surface (4) to the transport surface (5), and a forward position in which the stopping means (6) prevents the movement of a loaf of bread (10, 11). 11703132_1 (GHMatters) P112059.AU Fig. I
