Abstract (en)
[origin: WO2020070077A1] The invention relates to a plastic pallet (1), comprising a deck (2), feet comprising first and second foot elements (3, 4), wherein the first foot elements (3) are integrally formed on a deck underside (5), and the second foot elements (4) are integrally formed on runners (6), which connect at least two feet to one another, and connecting means for connecting first foot elements (3) to corresponding second foot elements (4). The connecting means are reversible, each comprising a tab (8) that is tongue-shaped, is integrally formed on one of the two foot elements (3, 4), and is elastically flexible about a bending axis (K), which tab is connected to the respective foot element (3, 4) at a fixed end in relation to the longitudinal axis (L) thereof. At a free end of the tab (8) with respect to the longitudinal axis (L) thereof, at least one hook is formed. The connecting means each comprise on the other of the two foot elements (4, 3) a hook receptacle (11) that is complementary to the hook (9) and receives the hook (9), such that the two foot elements (3, 4) are connected to one another via the hook (9), at least in a form-fitting manner.
