Abstract (en)

Ventilation device (1) for a LED vehicle light module (100), wherein the device (1) comprises an air channel (10) having an input opening (11), an output opening (12), and a bleed opening (13), wherein the air channel (10) comprises a nozzle section (14) which comprises a tapered cross-section such that the cross-section is bigger (14.1) coming from the input opening (11) and getting smaller (14.2) in direction to the output opening (12), wherein the bleed opening (13) is positioned in the nozzle section (14) and configured to direct bleed air through the bleed opening (13) out of the device (1) due to a pressure gradient between air in the nozzle section (14) flowing through the air channel (10) and air outside the device (1).
