Abstract (en)

An apparatus and a method are provided which allow 3D image generation based on an input image on the real-time basis. Processing for image frames of an input image is executed to generate a three-dimensional image. A template database that is correspondence data between attribute information of an imaging object of an input image and materials that are rendering elements of a three-dimensional image is referred to to select a material according to an imaging object attribute to generate a three-dimensional image. The template database has recorded therein materials of component units of the face of a person, and an image processing section applies a mask image of a component unit of the face and acquires a material for each component from the template database to execute material setting in a component unit of the face.
