Abstract (en)
An electric connection device is described, comprising: a first electric connection element (10, 10a) connectable to a second electric connection element (12, 12a); a bayonet-type locking and unlocking mechanism configured for coupling and uncoupling the first connection element (10, 10a) and the second connection element (12, 12a) through a mutual rotation; a secondary safety locking mechanism, configured for preventing the rotation of the first connection element (10, 10a) and of the second connection element (12, 12a) one with respect to another and the consequent separation of the two elements (10, 10a, 12, 12a) comprising retractable locking means (22, 24) configured to be unlocked by a removable unlocking tool (32), the removable unlocking tool (32) being connectable to the electric connection device through removable connecting means (40) configured to be removably fastened to the electric connection device.
