Abstract (en)  
[origin: WO2018224434A1] The invention concerns a pot for a cosmetic product, comprising a base (2) topped by a substantially cylindrical neck defining an opening, and a lid equipped with a seal (6) having a top surface and a bottom surface. The neck of the pot has a rim (203) with an inner periphery comprising a shoulder (204) that forms a concave surface. The seal (6) comprises, on the bottom surface of same, a flexible annular lip (603) that has, on an outer peripheral wall, a convex shape which, when the lid is tightened on the base (2), matches said concave surface over at least a portion of the height of the shoulder (204) and presses sealingly against said rim (203) around the entire inner periphery of same, so as to sealingly close the pot. The flexibility of the seal (6) and the shape of the lip (603) thereof, which complements that of the rim (203), allow it to be deformed in such a way as to be able to compensate for dimensional irregularities occurring at manufacture and ensure tight sealing.
