Abstract (en)
[origin: WO2018215383A1] The invention relates to a gait training device (100) comprising a treadmill (120) comprising a belt (121) and rolling parts (122-124), and a frame (130) on which the treadmill is mounted, the rolling parts comprising: - a plurality of balls (122-124) distributed around a central core (126), and - a cage (125) enclosing the plurality of balls in order to keep said balls on the central core while allowing them to be movable relative to said central core, the belt (121) being able to slide over the balls and rotate said balls on the central core.
