Abstract (en)

[origin: WO2018224469A1] The invention relates to a device for partially removing the coating of a metal plate, having the following features: - a die and a punch which together form a gap through which the metal plate is fed; - a drive for generating a movement of the die and the punch relative to the metal plate; wherein - the die has a protruding blade on the die surface facing the metal plate, the cutting edge of said blade pointing in the direction opposite to the movement direction of the metal plate; and - a pressing device for pressing together the die and the punch; - said punch having a roller which rolls on the metal plate surface opposite the blade.
