Abstract (en)

[origin: WO2018224600A1] The invention relates to a device (1) for automatically actuating a closing element (2) of a motor vehicle (3) by means of gestures, comprising a main carrier (10), which has at least one peripheral function in order to receive an energy supply from the motor vehicle (3), and a secondary carrier (30), which is electrically connected to the main carrier (10) and which has an optical sensor module (31) for monitoring an exterior space (4) of the motor vehicle (3), the positioning of the secondary carrier (30) relative to the main carrier (10) being specifically adjustable during the mounting into a housing (5).
