Abstract (en)  
[origin: WO2019197092A1] The invention relates to a cabinet (1) having at least one front part (2), which closes access to the inner region of the cabinet and is mounted movably relative to the cabinet carcass, and also having, in particular supporting, inner walls (3) or side walls (3) or at least one side cheek (17) arranged vertically in relation to the floor on which the item of furniture is standing. An access opening (5) is formed between the front part (2) and at least one side cheek (17) or between the front part (2) and at least one further front part (2) or between the front part (2) and an upper side (4), which in particular is formed as a table top. The access opening (5) is used to allow a user to reach with a hand behind the at least one front part (2) from a narrow side thereof, and the front part (2) is used to make the inner region, which is covered by the front part (2), accessible by movement of the front part. A profile (60) is arranged to the rear of the access opening (5) such that it is impossible to see into the inner region of the cabinet (1) through the access opening (5). The profile (60) has a first part (60a) and a second part (60b) connected thereto or formed in one piece therewith. The first part (60a) has a first face (61) visible through the access opening (5), and the second part (60b) has a second face (63) visible through the access opening (5). The two visible faces (61, 63) are arranged relative to one another such that a shadow gap (7) is formed therebetween.
