Abstract (en)

[origin: WO2018215300A1] The invention relates to a mechanism (100) for electrical equipment (10), comprising: - a base (110) which comprises a side wall (111) closed at the rear by a back wall, - an electronic circuit accommodated in the base, and - a connection terminal block (140) for an electrical conductor, which is connected to the electronic circuit. According to the invention, the side wall and/or back wall of the base has a window (113), and a projecting portion (133) of the electronic circuit extends through this window.
