Abstract (en)

[origin: WO2018224163A1] An electrical machine (100) having a conductor arrangement (200) is proposed. The wound conductor arrangement includes: an electrical conductor and an electrical insulation at least partially provided around the conductor. The electrical machine is adapted for applying a voltage up to a rated voltage Vmax to the conductor arrangement. The electrical insulation comprises a diamond containing insulation layer, the diamond containing insulation layer comprising diamond particles having a diameter of at least 1 µm in a direction substantially parallel to the conductor surface. The diamond containing insulation layer provides the highest dielectric strength and/or discharge resistance of the electrical insulation; and the diamond containing insulation layer having a thickness td in a range depending on Vmax.
