Abstract (en)

[origin: EP3636088A1] The hoods of conventional hooded outerwear lack sufficient functions pertaining to "getting the hood slip off" and "getting the eye area wet" by wind and rain from the front when riding a bicycle in rain. In addition, devices or rainproof tools that supplement these functions not only ruin the appearance thereof when worn, but also are inconvenient in terms of portability. According to the present invention, a holder is provided on the inside of an upper portion of a hood of hooded outerwear or the like, to fix glasses and the upper portion of the hood in a detachable manner, the glasses being worn on an eye area. Accordingly, the hood can be fixed by means of the glasses, in a state in which the hood is put on the head, and the lenses of the glasses can prevent the rain from hitting the eye area, whereby the problems regarding the appearance of the hood when worn and portability can be resolved.
