Abstract (en)
[origin: CN112981696A] The invention relates to a warp knitting machine having a warp beam (2) with a pin (1), the warp beam (2) being supported at the pin (1) by means of a support element arranged at the warp knitting machine, and the warp beam (2) is driven by a torque transmission assembly at the pin (1). The operation of the warp beam of the warp knitting machine is carried out economically. In this regard, the torque transmission assembly and the bearing assembly are arranged separately from each other.
