Abstract (en)

[origin: EP3636860A1] Cylinder (1) for actuation mechanisms comprising a main body (2) having a cavity (3), a rotating body (4) rotatably housed in said cavity (3) and having an axis of rotation (100) along a longitudinal development direction of the cylinder (1), wherein the rotating body (4) has, on a respective outer surface (5) having a longitudinal development, a groove (6) having substantially annular development centred in the axis of rotation (100) and lying on a plane perpendicular to the axis of rotation (100), wherein the cylinder (1) comprises a blocking element (7) fixed to the main body (2) and having an engagement portion (8) which slidably engages the groove (6) of the rotating body (4).
