Abstract (en)
[origin: WO2018229725A1] The frame comprises a first part (2) resting on a plane and a second part (3) interlockingly fastened to the first part (2). The first part (2) comprises four vertical uprights (4a and 4b) and a plurality of internally hollow bodies defined by a sleeve with a vertical axis (5, 6, 7 and 8) housing a portion of the respective vertical upright (4a and 4b) and by a sleeve with a horizontal axis (5a, 6a, 7a and 8a) housing the axial end of a respective horizontal bar (13, 15 and 17). The sleeves with a vertical axis (5, 6, 7 and 8) are freely rotatable about the axis of the respective upright (4a and 4b) so that the first part (2) can take a configuration with reduced overall dimensions and a prismatic shaped configuration on which the second part (3) is arranged. The first part (2) defines an inner space housing a first instrument (9), the second part (3) supports a second instrument (10) and the faces of the first part (2) are shaped so as to allow the hooking and the arrangement of members and the passage of assembling means between the inner and outer instruments of the first part (2) and supported by the second part (3).
