Abstract (en)  
[origin: WO2018229038A1] A portion comprising at least one chamber having a wall made of water-soluble material, wherein the portion comprises a composition which based on the total weight of the composition contains a total amount of 0.1% to 80% by weight of at least one surfactant, wherein said composition comprises at least two phases, characterized in that a) a first phase is a granular mixture of a solid-state composition and b) a second phase is in the form of a viscoelastic, solid-state molding of a second composition which based on the total weight of the second composition contains a total amount of more than 1% by weight of at least one benzylidene alditol compound of formula (I), wherein  $\ast$ -, n, m, R1, R2 und R3, R4, R5 und R6 are defined as in claim 1, is storage-stable, aesthetic and releases the composition contained therein rapidly and effectively to provide a surfactant-containing liquor.
