Abstract (en)

[origin: WO2018229332A1] An arrangement (100), optionally comprising one or more network accessible servers, for searching for digital video material, wherein the arrangement comprises at least one processor (102) configured to receive a number of video items: store the video items in a database; provide metadata, preferably a number of tags, for any or each video item wherein said metadata is obtained through utilizing supplementary data provided by at least one user device (104) via which said video item has been obtained; receive a search query wherein at least one search criterion comprised in the search query is related to said metadata; determine video item search results matching the search query among said at least one video item stored in the database; and provide an output to a user comprising the video item search results, wherein the video item is related to time duration and said provided metadata comprises at least one quality indicator, which is determined through analysis of said supplementary data related to one or more subitems of the video item, wherein a subitem is related to a subduration of thereof, and said at least one quality indicator is assigned to a corresponding subitem. A corresponding method is presented.
