Abstract (en)
[origin: WO2018228853A1] A plug-in connector part (1) for plug-in connection to a mating plug-in connector part (3) comprises a housing part (21), which has at least one receiving opening (210), and at least one electrical contact element (23), which is arranged in the at least one receiving opening (210). In this case, a caulking element (22) is additionally provided, which caulking element is arranged on the housing part (21), can be moved along a caulking direction (V) in relation to the housing part (21) in a preassembly state of the plug-in connector part (21) and can be brought into interaction with a caulking section (212) of the housing part (21) by movement in the caulking direction (V), so that the at least one contact element (23) is caulked with the housing part (21) in an assembly state. A plug-in connector part which allows manufacture while contact elements are reliably held in a precise position on a housing part and additionally allows simple handling is provided in this way.
