Abstract (en)

[origin: EP3639680A1] The invention relates to a method for the production of rod-shaped articles of the tobacco industry, each of which is a multi-component article (2) which comprises a plurality of cylindrical segments (3) aligned with each other along the respective longitudinal axes (X); and comprises: making at least some of the segments (3) forming each article (2) in the form of cylindrical capsules (3a), with a diameter equal to the diameter of all the segments (3) and containing inside them a filling material, in particular granules or fibres; feeding the segments (3) to the assembling unit (6), an inlet (I) of which is positioned and shaped to receive, in particular in an orderly succession, the capsules (3a); combining the segments (3) in groups in a modular combination section of the assembling unit (6); and wrapping a wrapping material around the combination of segments (3) in a wrapping section of the assembling unit (6).
