Abstract (en)

The invention relates to a monitoring device applicable to symmetrical electric strikes, particularly to symmetrical electric strikes (2) having a mechanism, which can be actuated electrically, for locking and unlocking a latch of the electric strike. Said monitoring device comprises an independent module (1) of the strike, suitable for being externally fixed on a symmetrical electric strike; said module (1) comprising an electric terminal strip (11) of the symmetrical strike connected to a power supply circuit and a switch (12) having a push button (13) suitable for the actuation thereof by the locking and unlocking mechanism of the electric strike (2).
